

DO YOU NEED A LAB DRAWN FROM AN OUTSIDE PROVIDER?

An outside lab order is one in which a provider in the community not affiliated with the health center has written an order for laboratory tests for a patient under his/her direct care.

Here's What You Need Know:

You have to be an established patient in order to have outside lab orders performed at the health center.

As we are not a drawing station, all outside lab orders must be approved by a provider on-site and must be on the approved lab list prior to the lab draw.

All outside lab orders must be presented to the center at least 2 days prior to the lab appointment. The MHO provider must review the outside lab orders prior to the order being placed into the system. A discussion with the patient may be required.

Note: All lab results shall be faxed to the outside ordering provider's office. In addition, the My Health Onsite provider who approved the labs will review them.

My Health Onsite abides by all federal HIPAA and confidentiality regulations.
